1.1	6 th May, 2026	Navya	Manpreet Singh	Upgraded Operator Check API details included

Operator Check API

Telenity's Operator Check API lets the third-party application (TPA) to retrieve the telco-service provider for their numbers and is available on commercial basis.

In the market, there are already n number of open-source APIs available for checking the operator for MSISDN values. However, it ultimately comes down to Efficiency and Accuracy where Telenity's Operator Check API comes into picture.

This API provides 100% accurate & real-time results in terms of telco-service provider of your numbers.

Client only needs to pass the MSISDN value with 91 in the API URI request, to fetch the corresponding mobile number's service provider.

Technical specifications

API Request:

API Description	To check the telco-operator of MSISDN values
HTTP Method	GET

API JSON Responses:

This screenshot shows an API response for AIRTEL. The status is 200 OK. The response body is a JSON array with one element: [{"operator": "AIRTEL"}]. The headers include Connection: keep-alive, Host: india-agw.telenity.com, Cache-Control: no-cache, Accept: application/json, and Authorization: Basic ZDcyYmZIZGVmNzZINzZjNTBjNzRiM...

Header	Value
Connection	keep-alive
Host	india-agw.telenity.com
Cache-Control	no-cache
Accept	application/json
Authorization	Basic ZDcyYmZIZGVmNzZINzZjNTBjNzRiM...

Body: [{"operator": "AIRTEL"}]

This screenshot shows an API response for Vodafone. The status is 200 OK. The response body is a JSON array with one element: [{"operator": "Vodafone"}]. The headers include Connection: keep-alive, Host: india-agw.telenity.com, Cache-Control: no-cache, Accept: application/json, and Authorization: Basic ZDcyYmZIZGVmNzZINzZjNTBjNzRiM...

Header	Value
Connection	keep-alive
Host	india-agw.telenity.com
Cache-Control	no-cache
Accept	application/json
Authorization	Basic ZDcyYmZIZGVmNzZINzZjNTBjNzRiM...

Body: [{"operator": "Vodafone"}]

This screenshot shows an API response for BSNL. The status is 200 OK. The response body is a JSON array with one element: [{"operator": "BSNL"}]. The headers include Connection: keep-alive, Host: india-agw.telenity.com, Cache-Control: no-cache, Accept: application/json, and Authorization: Basic ZDcyYmZIZGVmNzZINzZjNTBjNzRiM...

Header	Value
Connection	keep-alive
Host	india-agw.telenity.com
Cache-Control	no-cache
Accept	application/json
Authorization	Basic ZDcyYmZIZGVmNzZINzZjNTBjNzRiM...

Body: [{"operator": "BSNL"}]
